**ATELIER STIMAMIGLIO QUALITY POLICY**

*Rev. 0.1*

## **ATELIER STIMAMIGLIO QUALITY POLICY**

Atelier Stimamiglio intends to get certified in the following field of application: design and production of clothing for third parties.

The primary purpose is the pursuit of Customers satisfaction regarding the products/services provided and constantly improving over time.

We intend to subject our production process to quality control in a cyclical way, starting from the definition of our customers' requirements, whether they have been stated or not, and finishing with the monitoring of the whole process, including the production process.

The customer and his satisfaction are at the center of our activities: this is why we transform the customer's project into a finished product using a "proactive approach", both from a technological point of view but also in terms of the methodologies and human resources used, so that the company, as a system, is able to foresee future trends and changes ahead of time.

For this purpose:

- the commercial area must continue to expand its skills in order to offer customers maximum service
- the Supplier, through the qualitative compliance of the products / services provided, is considered of fundamental importance in achieving the quality consistency of our Quality System
- achieving these Quality objectives depends on the whole Company organization so all activities must be properly planned
- each Company Department must pursue the achievement of its objectives with the utmost commitment. Only in this way can the Organization maximize its final results
- a priority of the Quality program is the training of all staff, which must be planned with the participation of each Department Manager
- all the staff in the Organization must know about and apply the Quality Policy

Through effective Planning, these intentions will be implemented by means of measurable objectives and solid commitments towards their achievement, which of course implies acceptance of the pursuit of the Policy itself.

Everyone must be aware of the importance of the Quality factor and the need for continuous improvement.
